

Installing a door screw cover

Grasping the label, pull the screw cover gently upward to remove it completely from the frame. This step does not require the use of tools.

Secure the door by inserting a screw at the designated location in accordance with installation standard CSA A440 .4.

Pressing firmly, begin inserting the screw cover back into place starting at the top of the door.

Tap the screw cover with a rubber mallet to ensure a snug fit as you work your way down.

A hammer may also be used if a flat piece of wood is held between the hammer and the screw cover to prevent damage.
